1. Superscript letters:

- ^a. All items of water-based floor coatings do not consider the dilution ratio of water. Except for the total free diisocyanate items, the components other than water are mixed in proportion and determined.
- ^b. Solvent-based and solvent-free floor coatings are determined after mixing according to the application ratio specified by the product. If the amount of diluent used is in a certain range, it should be determined after mixing according to the maximum dilution ratio specified in the application ratio of the product.
- ^c. If the product specifies the dilution ratio or consists of two or more components, the diisocyanate content in the curing agent (including diisocyanate prepolymers) should be determined first, and then the content in the mixed coating should be calculated according to the application ratio specified by the product. If the amount of diluent used is in a certain range, it should be calculated according to the minimum dilution ratio specified in the application ratio of the product. Water-based floor coatings do not consider the dilution ratio of water.
- ^d. Prepare mixed samples according to the application ratio specified by the product, and then determine according to Appendix C of GB 24613-2009 and convert it to the content in the dry coating film.
- ^e. Floor coatings with sand added during application. The sand component is not considered in all items determined.

Note:

- Because the current GB (2011) and regulations (2016) of China RoHS are short of the recently added 4 items compared to the RoHS-EU list (4 items added in 2019), in order to ensure the uniformity of international standards, RoHS-EU is used as the implementation standard.
- Electrical and electronic products refer to equipment and ancillary products that rely on electric current or electromagnetic fields to work or generate, transmit and measure electric current and electromagnetic fields, with a rated operating voltage of not more than 1500 volts for direct current and not more than 1000 volts for alternating current. Equipment involved in the production, transmission and distribution of electrical energy is excluded.
